Hamming code

Aim:-

Write program to implement error and correction using hamming code. Make test run to input data stream and verify features.

Code:-

```
def calc_redundant_bits(m):
    for r in range(m+1):
        if(2**r)>=(m+r+1):
            return r

def main():
    data = input("Enter data:")
    m = len(data)
    r = calc_bit(m)
    n = m+r
    code = ['0']+(n+1)
    j = 0
    for i in range(1,n+1):
        if(i==(i-1)==0):
            code[i] = data[-(j+1)]
            j+=1
    for i in range(r):
```
