Experiment – 7

Aim :-

to write a program to implement flow control at data link layer using sliding window protocol.

Code

Sender.py

```
import time
w = int (Input ("Enter Window Size :"))
msg = input ("Enter Message")
frames = [[i,ch] for i, ch in enumerate (msg)]
base = 0
while base < len (frames):
  with open ("Sender_Buffer.txt", "w") as f:
    for i in range (base, min (base+w, len(frames))):
      f.write (f"{frames[i][0]},
               {frames[i][1]}\n")
  print ("\n Frames Sent :")
  for i in range (base, (min (base+w) len (frames))):
      print (frames[i])
  time.sleep (3)
  my:
    with open ("Reciever.-Buffer.txt","r") as t:
    data = f.read().strip()
  if data.startswith ("Ack"):
    ack = int (data.split (":") [1])
```
